

PFAS Declaration of Conformity

Amphenol Procom acknowledges the growing regulatory focus on Per- and Polyfluoroalkyl Substances (PFAS) across the European Union, the United States, and other global markets. These regulations aim to safeguard public health and the environment by requiring the identification, limitation, or elimination of PFAS in industrial and consumer products.

PFAS encompasses a broad group of carbon-based compounds in which hydrogen atoms are fully (Per-) or partially (Poly-) substituted with fluorine. This includes substances containing CF_2 or CF_3 functional groups, ranging from small molecules and monomers to short-chain fluorinated chemicals used in polymer production.

Amphenol Procom does not intentionally add PFAS to its products during the manufacturing process. However, based on current knowledge, we are aware that certain components, such as wire insulation, heat shrink tubing, and related assemblies, may contain PFAS-based substances like Polytetrafluoroethylene (PTFE). These materials are used in specific applications where no suitable alternatives are currently available, particularly in molded parts.

This declaration is based on data provided by our suppliers of raw materials and components. Amphenol Procom will share relevant information as it becomes available and to the extent it can be reasonably verified.

We remain committed to reducing the potential environmental and health impacts of PFAS, while ensuring uninterrupted support for global electronics manufacturing. Amphenol Procom upholds its dedication to regulatory compliance, transparency, and customer satisfaction.
